

Unit 13 Evaluation

This document is Unit 13 Website Evaluation, this document will contain information such as feedback, description of the whole documentation and etc.

Minimal Requirements

The website meets the minimal requirements of functionality and responsiveness, the website has a content more than the minimum eight pages and it has interactive page like buying a phone, it is fast and secure. The design is made professional with not more that two colors which are not bright colors that can drag the eye.

Evaluation

Meeting Requirements

In way to meet the requirements the team of the website like, Owner, Maintainer and Designer should understand and complete tasks.

Owner Requirements

Owner have to consultate with the designer and maintainer, he has to be inform for any charges
The owner has met the criteria

Designer Requirements

Layout and Pages

Owner requirements were met by creating 2 designs, main and alternative, creating a storyboard with at least eight panels/pages.

Typography

The designer has met the criteria by choosing what kind of fonts can be used in the website, they are easy to read and in a color that can be noticeable. Same and consistent size for every font in the website.

Color Scheme

The Designer met the criteria by choosing a color combination that is pretty looking, the colors are not more that two so it can look more professional and consistent. The colors the designer used for the website are normal white and grey rgb(180, 177, 187).

Images

The designer met the criteria by choosing specific size for the pictures that are going to be included in the website, they are in a square size of 400x400px. They are named and easy to find in the folder structure made

Conclusion

The designer met the all the criteria for his tasks

Maintainer Requirements

Folder Structure

The maintainer has met the criteria creating a folder structure for the project, giving all of the team the comfort of finding everything fast and secure, the folder were named properly and everything was placed in a specific folder.

Copyright

The maintainer has met the criteria by including URL of the images and videos, in that way the whole website is avoiding branching copyright laws, by creating a documentation of assets so it will contain all links of the pictures, also there is information such as price and the name of the product.

Website

The maintainer met the criteria by testing the website for its functionality, it is important the the website is all right so the users can enjoy all the features inside, the test was made on Firefox, Google Chrome, Internet Explorer, and Microsoft Edge.

GitHub

The maintainer met the criteria by creating a GitHub Repo of the project.

Save a Copy

The maintainer has met this criteria by creating a compressed folder copy of the project saved in a cloud, avoiding any progress loosing affected from broken system, in that way the project can be kept in secure place.

Conclusion

The maintainer has met all the criteria, from making the documentation required for this project.

Visitor Requirements

Functionality

The visitor has met the criteria by having no difficulties with the functionality of the website, it all work just fine.

Responsiveness

The visitor has met the criteria by having a responsive website, it can be accessed from any device like phone, tablet or desktop.

The Information

The visitors were able to check any information for a specific product.

Content

Other than phones the visitors enjoyed having more product like laptops and accessories, which all content was appropriate for business.

Conclusion

The visitor was able to access and use the website with no issues at all.

Why the website is suitable for the audience

The website is based for customers interested in buying technology, especially phones, but in the website can be found product like laptops, smart watches and earphones. It is easy navigable and fast loading.

People with vision difficulties

The website is responsive and it can be zoomed, in that way the text enlarge itself and can be read by people with vision difficulties, also the webpage is not made with too many different colors because of colorblind people, I wanted to make it universal for everyone so the white is white and the grey will be grey in everyone's vision.

Changes

Button on "Contact Us" page

The button on Contact us page was removed because it was causing a bug to the website, the goal was to make the website quick to load.

Dropdown

The dropdown on the design was meant to be placed at the right end of the website, the dropdown was placed to the left end of the website displaying "All Products" That one benefited with the consistency of the webpage, the design was looking better.

The button "buy"

The button buy at every product page was changed to "Buy for (price)" displaying above the button the name of the product on the top of the name was placed the logo of the company, this was beneficial because it was a creative way to put the price on.

Logo

The logo on the header of the page was removed, it was beneficial to the responsiveness of the webpage, because of the logo the page was having difficulties with making the page actually smaller.

Solutions I have done

Because the page was unresponsive for unknown reason, when I was trying to minimize or zoom into the page, the page was getting wider, so you can scroll sideways, I figured out what was the issue and that was the logo on the header of the document, I have removed it so my page can be responsive.

How the design will fulfil the purpose, user requirements and constraints.

The design is simply made and avoided too many colors which can cause confusion and struggle to read the text. Although the website is designed with only two colors which are white and grey, with only one font text and easy navigable structure of the pages, the customer can go back to the home page fast and easy with provided button on the page.

Feedback

Here are my feedbacks given by my two classmates, the task is to collect some feedback from two or more of other people. They have to check its functionality and criticize it.

No.	Name	Feedback
-----	------	----------

No.	Name	Feedback
1	Vasil	The page looks alright but you could add a bulky look to the navigation buttons, so they can look like actual button because now they look like links, the page is a little bit empty because it has no background pictures.
2	Armandas	It misses some details to the logo when you buy a phone from the website, the picture looks squashed, you can also putting more information in about us section.

Further improvements after feedback

Changes that can be added after finishing will be more advanced editing on the product pages, I don't like how basic they look, I can edit the whole structure of the page because I don't like how the pictures are spread through the sides of the page. Also the page when you click to buy a product is so empty, I can add more stuff to it like pictures, more buttons for different pages, suggestions and more like this so the page will look better and professional.

Changes made after the feedback

The feedback of Vasil informed me that I have to create bulky buttons for the website, although I liked them like this, because it was not adding any additional graphics that are without purpose. The feedback of Armandas informed me that the logo was it bad quality, after a bit of struggle I finally did succeed and I improved the quality of the logo.
